In the first project, the journalists visited Ghana that have embraced the use of digital technologies in agriculture. The journalists visited two leading national, regional and international projects like the Planting for Food and Jobs that is transforming our agriculture.

"The Government has prioritized the use of digital technologies to accelerate agriculture," said the minister.

"Ghana is delighted to host this year's AGRF; the first country to host the Forum twice since we last held it here in 2010. The Forum will provide an opportunity to share with world leaders on how we are transforming agriculture through increased budget allocations and the development of flagship systems in Africa." Benin's Minister of Agriculture, H.E. Lionel Zinsou, Former Prime Minister of Benin, said that AGRF 2019 will be an opportunity to scale this transformation trajectory of the past. He further added that AGRF 2019 will identify the opportunities for young people, such technologies will create many more job opportunities for young people," said Valentine.

The drones used by Valentine are assembled in Ghana which he bought 5 drones of his own using his savings that he plans to use when he starts his own drones company where he hopes to create employment for more young people like himself.

"The Ghanaian borrowing process is primary and secondary school, I never wanted to be a farmer or to be involved in agriculture," These were the words of Valentine Valentine, a 27 year old Ghanian Bachelor of Arts graduate as he flew a drone over a farm to see him at work. He explained that the 15-litter drone he was operating was assembled in Ghana which he bought 5 drones of his own using his savings that he plans to use when he starts his own drones company where he hopes to create employment for more young people like himself.

"I earned a lot and was very happy. From the first day of farming I'm seeing the tomatoes grow. I used to work on the farms where I sold my tractor to the farmer. They constantly receive calls from farms who have seen us on TV to demonstrate what drones can do. This is a part of the future," said Valentine. The services offered by Valentine have been very successful and he hopes to create employment for young people like himself.

The drones are very important for young people who want to create employment opportunities.
